

Colour coding for NMR tube caps

We **strongly recommend** groups use the coding scheme below for their NMR tube caps.

This helps reduce the chance of sample loss and helps the NMR Service staff track the many hundreds of samples they process each year.

The indication "+black" suggests the top of the cap should be coloured black with an indelible marker (as there are insufficient cap colours for all groups).

Tube caps may be ordered from [GPE Scientific](#) as bags of 100.
